

This brief illustrates the current status of childhood immunization in Alabama and is intended to inform state-level policy decisions and priorities. Takeaways include:

- State-level immunization coverage in Alabama for MMR vaccination is above national levels.
- Alabama’s non-medical exemption rate among kindergartners is lower than the U.S. median.
- State-level per capita public health spending is higher than the national rate.
- Alabama has reported 1 case of measles since January 1, 2025.

VACCINATION COVERAGE

Maintaining sufficient vaccination coverage is critical for establishing community protection. The charts below demonstrate how coverage for two critical vaccines has changed over time in Alabama and how it compares to neighboring states, national rates, and Healthy People 2030 (HP2030) targets.

Proportion of 2-year-olds fully protected with DTaP vaccines

In 2023, more 2-year-olds were fully vaccinated against diphtheria, tetanus, and pertussis (received all four doses of DTaP) in Alabama compared to the previous year. Coverage in Alabama is below the HP2030 target of 90%.

Proportion of kindergartners protected with MMR vaccines

Vaccination in Alabama over time

Vaccination comparison (2024)

In 2024, a higher proportion of kindergartners completed the measles, mumps, and rubella (MMR) vaccine series in Alabama compared to the previous year. Coverage in Alabama exceeds the HP2030 target of 95%.

VACCINATION EXEMPTIONS

Many states allow children attending public school to receive vaccination exemptions for religious reasons or for personal reasons, sometimes referred to as “philosophical exemptions.” Higher rates of non-medical exemptions have been linked with increased disease transmission.

Alabama’s rate of non-medical exemptions among kindergartners during the 2024-25 school year is similar to the state’s 2023-24 rate.

PUBLIC HEALTH SPENDING

Low levels of public health spending are thought to contribute to suboptimal immunization rates. Nationally, Alabama ranks 18th in public health spending.

UNIVERSAL VACCINE PURCHASING

In states with Universal Purchase programs, the state government purchases all recommended vaccines for all children, regardless of insurance status. These initiatives can help to address disparities in vaccine coverage and support equitable vaccine access.

SUPPORT FOR IMMUNIZATION

Strong policy commitment to immunization is critical for effective vaccination programs. The state legislature has recently introduced several bills that would affect state-wide childhood vaccination, a selection of which are described below. The arrows below indicate whether these bills would strengthen (↑) or weaken (↓) vaccine safety nets.

AL HB 444 (Not enacted) – Allows religious exemptions from immunization requirements for students attending religiously affiliated private schools, with documentation provided by a caregiver

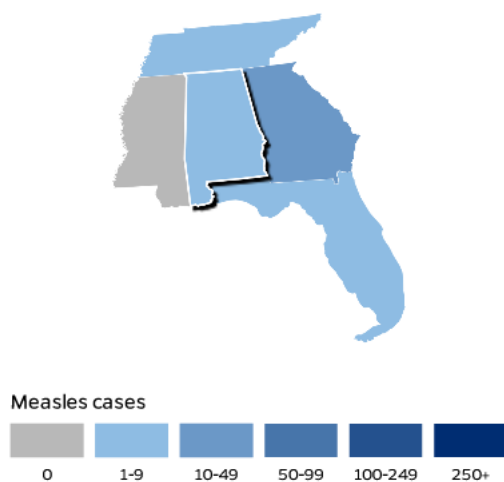

AL HB 367 (Not enacted) – Prohibits governmental entities and county health departments from using public funds to produce or distribute materials that promote vaccination

AL SB 85 (Not enacted) – Specifies that religious exemptions to immunization requirements are permitted with a written declaration from a parent or guardian

DISEASE STATUS

Measles outbreaks can indicate insufficient vaccination coverage within a population. Disease may spread across state borders when vaccine coverage is low. The map below visualizes the number of measles cases reported in Alabama and neighboring states between January 1, 2025 and September 15, 2025.

1 measles case in Alabama

Vaccines can help prevent expensive disease outbreaks. A 2018–19 measles outbreak in Washington was estimated to cost US\$47,479 per case for both direct medical and public health response expenses.
